

Missing Script Finder

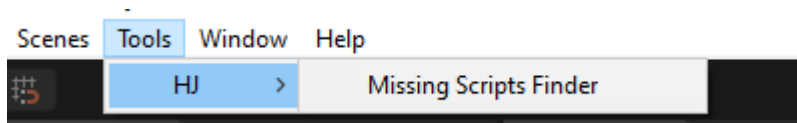

Why?

tool designed to streamline your Unity development workflow with just one click. Swiftly identify missing components/scripts within Unity projects, whether it's inspecting prefabs or scrutinizing the open scene.

How To Use

Go to the top window bar then:

Tools -> HJ -> Missing Scripts Finder

After that you will be greeted with a window to select where to search we have two options:

- Scene searching: where it searches the current open scene
- Prefab searching: where it searches all the prefabs inside the project

After you select the mode it will automatically search said mode, to refresh simple press the refresh icon located at the top right corner.
